

*School is a child's
second home...*

Our children spend tens of thousands of hours in school buildings, during their most critical years of development.

Research has shown that long-term exposure to low levels of chemical toxins commonly found in and around schools can cause acute and chronic health problems, and interfere with a child's ability to learn, socialize and participate in normal school activities.

What can parents do?

Join us for a discussion of simple steps many schools are taking to make their school environments healthier for everyone.

*Learn what you can do to ensure
YOUR child's school is a ChildSafe School!*
